Research Focus

My research focus is on audio-visual video understanding, particularly in egocentric videos. Here, my aim is to leverage both audio and video modalities to their maximum potential for solving challenging problems such as action recognition and detection. More recently, I have also begun exploring video understanding in 3D.

Education

PhD in Computer Vision *September 2021 – Current*
University of Bristol *Bristol, UK*

- *Thesis Title: Audio-Visual Video Understanding*

MEng in Computer Science *September 2017 – September 2021*
University of Bristol *Bristol, UK*

- *Degree Classification: First Class Honours*
- *Dissertation Title: Video GANS for Human-Object Interactions (83%)*

Teaching

Teaching Assistant *September 2019 – Current*
University of Bristol *Bristol, UK*
Software Product Engineering (Y2), Games Project (Y3), Computer Graphics (Y3) Image Processing and Computer Vision (Y3), Applied Deep Learning (Y4)

Datasets

EPIC-Sounds *Released January 2023*
Audio-Centric Annotated Dataset *Paper Published in ICASSP 2023*
EPIC-Sounds is an audio-only dataset, gathered across 100 hours of untrimmed audios from the EPIC-KITCHENS Dataset. This dataset was motivated by the observation that audio-visual networks tend to use temporally and semantically identical annotations for both modalities, yet audio and video can differ significantly even when describing the same action.

Roles:

- Post-processed the labelled segments from annotators, this included:
  - Manually correcting typos in the free-form text descriptions
  - Removing erroneous/redundant annotations
  - Categorising the free-form descriptions into the 44 classes in the dataset.
  - Decomposing challenging segments containing multiple overlapping sounds into distinct annotations.
  - Training binary classifiers on the head classes of the dataset to clean the training data
- Trained and ran quantitative analysis on the baseline models.
- Visualisation of the class distribution for the dataset.

- Analyses on the gathered data, such as the duration distribution of all classes and interplay between the visual and audio labels.
- Setting and managing two challenges on the dataset: Audio-Based Interaction Recognition and Audio-Based Interaction Detection

Honours and Awards

EgoVis 2022/23 Distinguished Paper Awards *June 2024*
First Joint Egocentric Vision Workshop *IEEE/CVF Conference (CVPR)*
Awarded to our 2023 ICASSP paper: "EPIC-Sounds: A large-scale dataset of actions that sound."

EPIC-KITCHENS Challenges Winner *June 2024*
First Joint Egocentric Vision Workshop *IEEE/CVF Conference (CVPR)*
Audio-Based Interaction Recognition (2nd), Audio-Based Interaction Detection (2nd), Action Detection (3rd)

Top 5 Third Year MEng Computer Science/Computer Science with Maths Student *October 2020*
Netcraft *University of Bristol*

Research Activities

Presentations

- EPIC-KITCHENS Challenges. Presented at the First Joint Egocentric Vision Workshop (CVPR 2024).
- Oral Presentation for EPIC-Sounds. Presented at ICASSP 2023.

Reviewing

- Reviewer for ECCV 2024 and TPAMI (2024)
